

## DIRECTORY

### PURPOSE

Symbolic name for DATAPLOT's DIRECTORY file. It is used with the SEARCH and LIST commands.

### DESCRIPTION

DATAPLOT's directory file contains a list by command category of all DATAPLOT commands with a brief (one line) description. It also list the data files, macro files, program files, and experiment design files that are available on-line.

### SYNTAX

None

### EXAMPLES

```
SEARCH DIRECTORY PLOT
LIST DIRECTORY FOR I = 1 1 35
```

### NOTE

The DIRECTORY file is stored in the DATAPLOT directory. It has the name DPDIRF.TEX (or dpdirf.tex for Unix systems). The exact file name and the directory where it is stored can vary depending on the installation (see your local DATAPLOT implementor to find the exact name on your system).

If DATAPLOT is unable to open the directory file, it is most likely because the directory name is not specified correctly in the local DATAPLOT code. See your local DATAPLOT implementor to have this corrected.
