

Disclaimer

The purpose of this manual is to give the analyst a detailed description of the commands in the DATAPLOT language. The LET subcommands and library functions are documented in a separate manual.

Certain commercial brand names (e.g., Tektronix, Calcomp, IBM) are mentioned in this document. This does not constitute an endorsement of such products by either the authors or the United States Government.

The features and capabilities described in this document are for version 95/1 of DATAPLOT. Most (but not all) descriptions also hold for prior versions. An implementation date is provided in the documentation for each command to indicate when it was added to DATAPLOT.

Neither the authors nor any branch of the United States Government may be held liable for errors arising from the use of the DATAPLOT language or the implemented DATAPLOT system.

Suggestions and comments are welcome. See the Preface for information on how to contact the authors.
